As your business grows and technology evolves, depend on PSE industrial automation consulting services to help you optimize your plant floor operations.

We analyze and develop flexible, scalable solutions that help you improve productivity, manage costs and minimize risk as your business grows. Depend on our industrial automation services to meet all your plant-level needs — from programming, configuration and systems integration to long-term support for achieving and sustaining operational excellence in your facility.

PSE industrial automation consulting services ensure success for new facilities, expansions and periodic process automation assessments.

We offer complete insight into your operations, including control system architecture evaluation, controls assessment, and assistance with change management and planning. Develop an actionable strategy to optimize all of your plant floor operations with PSE's expertise.

Improve your plant efficiency and operations monitoring capabilities with PSE's industrial automation integration services. Our teams help you select the right components for optimal control systems integration and provide complete programming, configuration, simulation and startup services with a focus on maximizing your ROI.

PSE can help you optimize the investment in your control systems and data infrastructure to improve your overall profitability.

Field Services

Meet all your technical requirements with PSE's industrial automation services. From technical support to upgrades and long-term maintenance, we can provide the resources needed to keep you operating with a competitive advantage.

As your business grows and technologies change, count on PSE to provide the upgrades, migration support, system diagnostics and reliability solutions you need for sustainability. Our industrial automation services teams provide on-call and long-term support whenever you need us.

Industrial automation consulting adds value at any point along your organization's timeline — as a part of greenfield facility startups, brownfield modernization projects, user requirements and functional specifications, hardware and software vendor analysis, system upgrades and periodic process automation assessments.

Industrial automation solutions are customer specific and are dedicated to the tasks of increasing productivity, reducing assembly and testing times, providing repeatable and

controlled assembly processes, ensuring quality control, improving operator safety and reducing cost.
